

OPP CONCERNED SHEEP BREEDERS SOCIETY

2011 MEMBER DIRECTORY

Our membership represents many different breeds and many different situations. Some of us have, despite repeated testing, never had an animal test positive for ovine progressive pneumonia (OPP); some of us started with stock from a clean flock; some of us are in the process of eradicating the disease from our flocks. In other words, membership in the Society and inclusion in this directory is not intended to indicate freedom from OPP, but rather an active concern about the effects of this and other diseases within our own flocks and within the North American sheep industry as a whole.

Last updated in December of 2011, this directory includes individual members from 24 states and the province of Ontario, along with 5 breed associations. Member flocks range in size from fewer than a dozen ewes to 1,000 and more. The information is as accurate as we can make it but details, statistics, and test results can change quickly (and of course, mistakes — typographical and otherwise — do occur). Please contact individual breeders for more specific information about a particular flock. Ask about health records and test results, the status of the flock, methods of eradication, etc.

The OPP Society welcomes purebred and commercial producers as well as breed associations, veterinarians, researchers, and all others who share our interest in ovine health issues. We invite you to join in our mission to build awareness and provide education and support on request. Annual membership dues (\$15 U.S.) are our sole source of funding.

BLACK WELSH MOUNTAIN (ewes: 70)
Testing regularly for CL and OPP. Originally had some CL positives on first test who were culled. Retested whole flock twice and no new positives were found. Culture of all abscesses over last 8 years has never found another CL infection. Completed 4 whole-flock AGID tests for OPP; all negative. Now test approximately 10% of the flock for OPP annually at Colorado State University. Have never had an OPP positive sheep. Entire flock scrapie genotyped at codon 171 and most at codon 136. SFCP Certified scrapie free. Status date May 2000.
